Assembling the Umbrella

- 1 The Sunranger Gala will come in either one full piece for a 3m Square model, or a two-piece pole for a 3x4m Rectangular or 4m Square umbrella. If the bottom pole needs to be attached then do this first. Ensure that the spring-loaded knob on the bottom pole is in line with the pre-cut hole on the umbrella pole before sliding the bottom pole in to avoid the clip getting stuck whilst connecting the poles.

Once this has been completed, the umbrella can now be stood on a base (1).

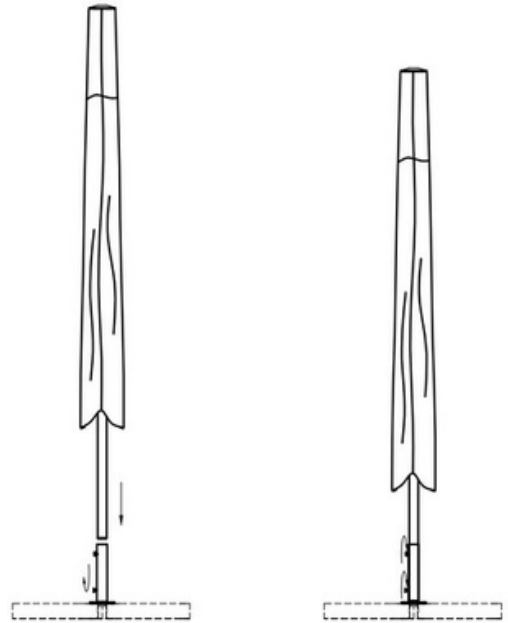

- 2 Before opening the umbrella, the winder handle must be installed into the centre pole. The winder handle is attached at the midpoint of the umbrella and is simply screwed into the pre-cut hole for the centre post (2). After this has been completed, the umbrella is ready to open.

Operating the Umbrella

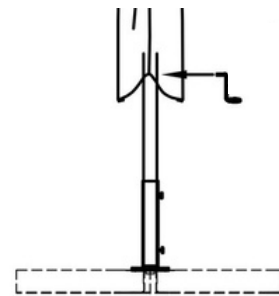

- 3 The Sunranger Gala umbrella is easy to operate once it has been installed. The winder handle is simply rotated clockwise to open the umbrella and anti-clockwise to close it. You'll know the umbrella is open to its fullest point when the central hub clips over the predrilled hole at the top of the centre post (3).

When not in use for long periods, close the Gala completely and use the complimentary polyester cover to protect the umbrella whilst it is closed.

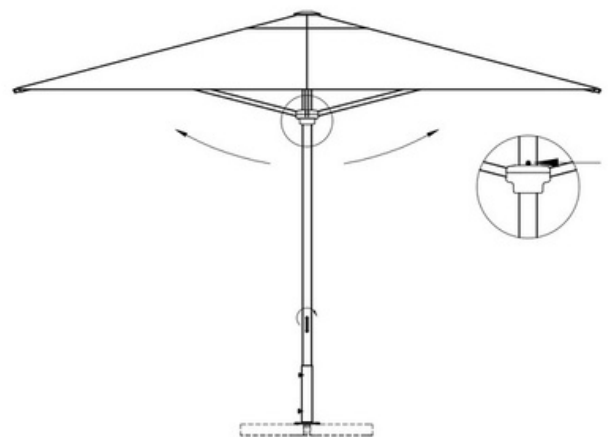

For more maintenance and care instructions - please see the 'Shade Australia Aluminium Care and Maintenance Guide' on our website.

1 - Once assembled, the Gala can be placed and secured into a base.

2 - The winder handle is screwed in and attached around the midpoint of the umbrella.

3 - Use the winder handle to open the umbrella - it will clip into place once opened to its max point.
